Education

Uttaranchal University

Bachelor of Technology in Computer Science, CGPA: 9.1

Sept 2022 – Aug 2026

Dehradun, Uttarakhand

Relevant Coursework

- Data Structures
- Database Management
- Computer Networks
- Computer Architecture
- Algorithms Analysis
- Operating System
- Distributed Systems
- OOPS

Experience

Acorn Globus

February 2025 – July 2025

Software Engineer Internship

Remote

- Engineered an **automated abandonment recovery system** that securely dispatches continuation links to users who drop off mid-way, directly improving overall form completion rates.
- Integrated an **AI-powered form generation engine** into the core Formester platform, allowing users to instantly preview generated forms on-site with zero friction and no login required.
- Developed **dynamic state-validation logic** allowing form fields to conditionally render in real-time based on a user's secure email verification status.
- Built a **dynamic embed configurator** that gives clients full control over iframe injection parameters, including dimensions, hex themes, and typography.

W3 Dev

August 2024 – September 2024

JavaScript Development Intern

Dehradun, Uttarakhand

- Enhanced the AI chatbot's **prompt generation logic** to deliver more accurate, relevant, and coherent responses.
- Developed **export-to-PDF** functionality and integrated **chart/graph visualizations** for improved data representation within the chatbot.
- Implemented a complete **chat history system**, enabling users to access and navigate previous conversations.

Projects

Reeling |

2026

- Architected a stateless, horizontally scalable **Go API layer** handling concurrent transcode jobs using **NATS JetStream** as a durable message broker for decoupling upload ingestion from CPU-intensive workloads.
- Engineered an asynchronous worker pool wrapping **FFmpeg**, optimizing processing time and supporting high-concurrency multi-rendition stream generation (HLS) with minimal latency.
- Utilized **PostgreSQL** for persistent transactional job state management and **AWS S3 / MinIO** for scalable delivery, maintaining 100% data consistency during worker crashes.
- **Tools:** Go, FFmpeg, PostgreSQL, NATS JetStream, AWS S3, Docker, REST API

Koder |

Jun 2025 – Jul 2025

- Built a low-latency remote code execution engine safely isolating arbitrary user code and streaming output back to the client in milliseconds.
- Designed distributed **Redis caching** and optimized **MongoDB** aggregation pipelines, cutting query time by 60% and reducing database load under high-concurrency scenarios.
- **Tools:** Next.js, TypeScript, Node.js, Express.js, MongoDB, Redis, BullMQ, Docker

Technical Skills

Languages: Go, TypeScript, Python, Java, JavaScript

Backend / APIs: Node.js, Express.js, REST APIs, gRPC, Socket.IO

Databases & Queues: PostgreSQL, Redis, MongoDB, NATS JetStream, BullMQ

Cloud / DevOps: Docker, AWS S3, MinIO, GitHub Actions CI/CD, Git, Linux

Architecture / Tools: Microservices, System Design, FFmpeg

Open Source Contributions

Shipwright ([shipwright-io](#)): Contributed to the core framework for building container images on Kubernetes.

ConnectRPC ([connectrpc](#)): Contributed to the Connect family of libraries for building browser and gRPC-compatible APIs.

OpenStatus ([openstatusHQ](#)): Contributed backend enhancements for the open-source synthetic monitoring platform.

KAgent ([kagent-dev](#)): Migrated legacy ToolServer and MCPServer manifests to v1alpha3 RemoteMCPServer.
